## **DETAILED ACTION**

### ***Specification***

1. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

2. The abstract of the disclosure is objected to because it does not contain the requires description of the invention. Correction is required. See MPEP § 608.01(b).

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3672

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 9 and 17-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Campbell et al. (US 6,012,523).

Campbell et al. teaches all the limitations of claim 9 including: applying an axial force to a first piston using a second piston (column 7, lines 3-17).

With respect to the dependant claims, Campbell et al. also teaches: annular cross sections (figures 1a, 1b, 1-4 and 9-11)-claims 17, 21, and 27; moveably coupling to tubular support (figures 7-11)-claim 18; displacing and exhausting (column 7, lines 42-61)-claims 19 and 20; relative areas (figures 1a, 1b, and 9-11)-claims 22, 26, and 28; relative pressures (column 7, lines 29-61)-claim 23; isolation (220)-claim 24; fluidic force (column 7, lines 18-28)-claim 25; injecting fluid (column 7, lines 18-28)-claim 29; first piston is an expanding cone (abstract; column 7, lines 3-17)-claim 30; conical surfaces (figures 1a, 1b, 1-4)-claim 31; applying force with fluid and having the relative areas (figures 1a, 1b, 1-4 and 9-11; column 7, lines 18-28)-claim 32; and all previously mentioned limitations (see previous references)-claims 33-35.
